

Authorization for Gas Manifold Usage: Key-Features

The keys for the lockable valves of the COLTRIMS gas manifold, which are used to prevent accidental release of hazardous (toxic) gas into the atmosphere or prevent unintentional mixing of gases, are located in the main ALS control room (key locker).

The keys can only be checked out by the people below. The keys must not be transferred to any other authorized or non-authorized person(s). **Note: The keys need to be with that person until returning them to the control room.**

I hereby declare, that I have read and understood the procedure called “Gas Manifold System for the COLTRIMS chamber with Administrative Lockout Capability”, located in the binder at the vacuum controller cart. Moreover (if applicable, i.e. toxic gases are part of the portfolio), I confirm that I have taken the ALS gas cabinet training.

Name	Badge Number	Date	Signature

The personal was authorized by the experimenter in charge:

Th. Weber
Chemical Sciences Division
Building 2, room 118
TWeber@lbl.gov
x5588

signature: _____

date: _____

The keys may be returned to the Principal Investigator after completion of the experiment.
